Teramind – Employee Monitoring Software | Know your Employee

Employee monitoring is used to monitor employee computer activity and in addition to basic employee monitoring, top-ranking solutions also include insider threat detection, third-party vendor monitoring, data loss prevention, risk management, legal and compliance features as part of their monitoring suite.

Teramind Features

? Real-Time Employee Tracking

Teramind monitors all employee activity covering all objects like web/apps, emails, keystrokes, network etc. Even on-screen content with OCR. Create monitoring profiles for employees, groups or departments based on your monitoring needs.

? User Behavior analytics

A smart behavior analysis can detect insider threats that indicate deviation from normal behavioral baseline. Dynamic risk scoring and vulnerability scanning identifies insider activity before they represent a real threat.

? Insider Threat Detection

It immediately notified about unsafe employee activity and automatically block any harmful action, lock out the user or take remote control of their computer before any data theft or unauthentic attempts.

? Policy and Rules Engine

Start with hundreds of pre-built rules templates, activity classification lists and data categories. You can also create your own policies and rules. You can also use natural English, regular expressions and sample conditions to easily define your requirements.

? Built-In Productivity Optimization

You can define which apps and websites you consider productive and get in-depth reports on how your employees utilize them. You identify the low or high performers with active time analysis and start a feedback loop to refine your organizational workflow through tracking of schedules, projects and employee engagement rate for overall productivity boost.

🔍 Audit and Forensics

You can record all your employee activity in terms of video recording, audio recording, session recording, immutable logs, alerts and optional OCR search. It provides a huge collection of analytical data to locate the source of an insider threat with 100% accuracy.

🔍 Third Party Vendor Management

It also covered third party access to your critical systems and enable you to control vendor management and third-party SLA and decreases the chances of cyber threats.

🔍 Compliance Management

You can use to create activity and schedule based rules to support several common compliance requirements like implementing audit trails (GDPR), limiting unauthorized login (ISO 27001), prevent unencrypted file transfers (PCI DSS), reporting, and more.

PRICING

Deploy in Cloud

Starter	UAM	DLP
₹ 3660 user/year	₹ 7644 user/year	₹ 9180 user/year
Productivity Reports	Everything In Starter Plus	Everything in UAM Plus
